What can we do for you?

Upon initial contact we will customize a package based upon the procedures performed as well as the strength, weight capacity and brand of MR system(s) used. We will take into account specific product requests and determine the most cost effective solution to our customers needs. We present a quotation on a full custom package including freight, rather than a pre-packaged kit that is incomplete and contains items that may go unused. We specialize in custom non-ferrous products that may require additional time for production. We will provide the necessary lead time and discuss a final purchase order date that will allow for delivery before a grand opening or re-opening. Once a purchase order has been received, upon the customers request; we may hold all products to be delivered at one time or have it delivered as available. Products in stock at the time of order will be immediately tagged for that order and held until the release date. This eliminates the possibility of a stock item at order date becoming out of stock on the release date. We supply MSDS sheets on pertinent products for our customer's records. Two days before release date, we will contact our customer to verify they're ready for the delivery. If there is a delay in the facilities opening, we will hold the product until needed at no additional charge.

Above all else, we will take that extra step in providing our customers with knowledgeable advice, low prices, on-time delivery and excellent customer service. We recognize that each of these attributes are vital to a smooth transaction and a satisfied customer.

Before ordering, please read our company terms and policies on inside back cover.

Safety is our Business!

Our dedication to safety begins at 7:00 AM every day of the work week - it is our livelihood. All products in our warehouse are checked on entry and then re-checked on exit. Products drop shipped from our manufacturers directly to your door are brought in randomly and re-tested for safety verification. We continually work with all manufacturers to ensure safety and proper designation.

The highly anticipated Standard Practice for Marking Medical Devices for Safety in the Magnetic Resonance Environment by American Society for Testing and Materials (ASTM) has arrived.

As recommended by ASTM Int; the intent of this practice is to provide needed information about the safety of items in and near MR scanners using a compact and easily recognized set of symbols and terms. The terms MR safe and MR compatible as first defined in 1997 in the FDA draft guidance document, "A Primer on Medical Device Interactions with Magnetic Resonance Imaging Systems," have been used to describe the safety of devices in and near MR systems. However, there has been a great deal of confusion surrounding this terminology. An incorrect assumption is often made, and users often incorrectly assume that items labeled MR safe or MR compatible are safe or compatible for any MR environment. MR environments vary in terms of magnetic field strength and RF conditions. This new system eliminates much of that confusion.

Icon Designation

MR Safe

Any item that poses no known hazards in all MR environments.

MR Conditional

Any item that has been demonstrated to pose no known hazards in a specified MR environment with specified conditions of use. Field conditions that define the specified MR environment include field strength, spatial gradient, dB/dt (time rate of change of the magnetic field), radio frequency (RF) fields, and specific absorption rate (SAR). Additional conditions, including specific configurations of the item, may be required.

MR Unsafe

Any item that is known to pose hazards in all MR environments.

Products **NOT** marked with a designation have been tested under the past methods and are currently being re-evaluated under the new ASTM Standards. Products will be updated continually.

CE Certified

These products comply with the essential requirements of the relevant European health, safety and environmental protection legislation.

MR Safety Standards

Now, at your fingertips, is a diverse line of Non-Ferrous and PVC products for your MRI environment. MRlequip.com was established to provide the highest quality MRI compatible equipment with price tags significantly lower than the current marketplace. In the past, it was a priority to clear the room of all ferrous materials that pose an immediate risk. Now, a majority of those items can be replaced, in extent saving time and creating a friendlier environment for both the patients and the providers. Beyond the standard items, such as wheelchairs, i.v. poles and stools, a whole new world of products has opened up. Ranging from sound systems to furniture, these products increase patient comfort while decreasing concerns for injury and liability.

At MRlequip.com, we are constantly researching new products and welcome any suggestions you might have. If you can't locate what you require, let us know. Our design teams are ready for their next challenge.

Ferno MRI Gurney 400 lb Capacity

Model 30NM The "Standard" and the lightest lift-in cot in the industry. Ferno's Model 30 Multi-Level, Lift-in Cot served as the industry standard for many years and is still used by many ambulance companies and medical facilities. The Ferno Model 30 cot adjusts to six height levels, enabling patient transfer from most nursing home beds or hospital treatment tables. To operate the height adjustment mechanism, the EMTs must assume the patients weight prior to raising or lowering the cot-bed frame. Because the Model 30 must be lifted to be loaded into the vehicle, it can be used with ambulances that have various floor heights. The Model 30 cot will work well in station wagons, vans or modular ambulances. The telescoping head-end main frame section allows the Model 30 cot to be shortened for maneuverability around tight corners and spaces. The Model 30NM is the Non-Magnetic version for medical treatment areas where the cot must be non-magnetized.

Flexible Curtain Tracking

Flexible curtain tracking gives you a quick and easy option for room renovations. Our selection of bendable curtain track comes in 8', 16', 40' & 105' lengths. Below you will find the flexible curtain track materials including all of the necessary hardware for installation. If you have any questions on our flexible curtain tracking please contact our friendly customer service. We will be happy to assist you.

Features:

A 99% recycled aluminum core and ABS (non-PVC) shell - this patented product provides a sustainable solution for your track needs.

Aluminum core and ABS shell is easily trimmed on-site with a hand saw.

The ABS material does not contain phthalates, PCBs (Polychlorinated biphenyls), or PBTs (Persistent Biocumulative Toxins).

Easy to install and works with virtually any ceiling type including both tegular and flush ceiling tile.

Carriers that slide quietly and effortlessly across the track.

Class A Fire Rating.

Flexible Curtain Track Case Study:

Before:

The curtain track and carrier use a plastic carrier that slides in the metal track. This style of track and carrier has a tendency to repeatedly get stuck and slide, which creates rattling, and plastic on metal contact that produces excess noise.

After Renovation Complete:

The new flexible curtain track and carriers produce **75% less sound** than the original grooved style and has been installed throughout all hospital Level III areas.

Ferromagnetic Detection System HALO II Plus MRI Entry System

FerrAlert™ HALO II - Ferromagnetic Detector complies with ACR and JCAHO standards to protect the magnet room against moderate to large size ferromagnetic projectiles. This product significantly helps to protect the investment in the magnet and to avoid a catastrophic accident. FerrAlert™ HALO II ENTRY has been certified by Siemens Medical Solutions for installation and use inside the magnet room for both 1.5T and 3.0T MRI magnets.

OPERATION:

The Green LED HALO array illuminated around the MRI entrance indicates that the detector is scanning and there are no ferromagnetic threats detected.

A Yellow beacon light indicates that a threat is approaching the portal.

The Red LED HALO array flashes the entire portal, indicating a major threat such as a ventilator or oxygen cylinder has approached the portal.

The greater the threat, the further away the warning is activated.

Ferrous objects not approaching the entrance to Zone IV do not trigger an audible warning.

SPECIFICATIONS:

Dimensions: Height 83" (211cm), Depth 2.25" (5.7cm)

Adjustable Width: 42" (107cm) to 52" (132cm) Inside; 47" (119cm) to 57" (145cm) Outside

Complies with ES60601-1-8 International Standards for Medical Device Alarms

Complies with IEC 60101-1:2005 Medical Device Specifications Requirements

Medical Power Supply: 100 to 240 VAC, 47 to 63 HZ, 42 Watts

Sensitivity: Adjustable

Audio Alarm: In Portal

Photoelectric Beam: Activates Alarm Function mode when moving object enters Portal

The FerrAlert™ Encompass Incident Log Manager

The FerrAlert™ Encompass automatically detects and logs unintended ferromagnetic objects entering Zone IV. It is the only system that provides a photographic stream and does not require manual logging, thus allowing the technologists to perform uninterrupted patient care without wasting time with self-reporting. The data analysis software allows effortless generation of reports for The Joint Commission inspections. It also allows for the analysis of safety trends that can be shared throughout the entire hospital system.

Features:

Adjustable width 25-52 Inches.

Sorting of data to identify unintended ferromagnetic objects.

Easily implemented connectivity and expandability.

Records images before, during and after the Ferromagnetic threat enters the magnet room.

MRI Non-Ferromagnetic Stretcher with Wrap Around-Rail System

Oxygen Tank Not Included
Shown with Optional IV Pole
Shown with Optional O2 Holder

Our new Non-Ferromagnetic Gurney with Wrap-Around-Rail System effectively and, most importantly, safely transports patients from one end of the hospital to your MRI suite. Perfect for transporting children and distressed patients.

Works with non-ferromagnetic detection systems

Ferromagnetic Detection Systems Feature the Following:

- Reduces the risk of injuries and death
- Detects ONLY ferromagnetic materials
- Safe for patients with passive/active implants
- Indicates the location of the offending object right on the portal
- Reduces operating cost by increasing patient throughput
- Completely “passive device” does not emit RF, EM, or Magnetic fields

Patient Comfort System General 12 Piece Positioner Kit

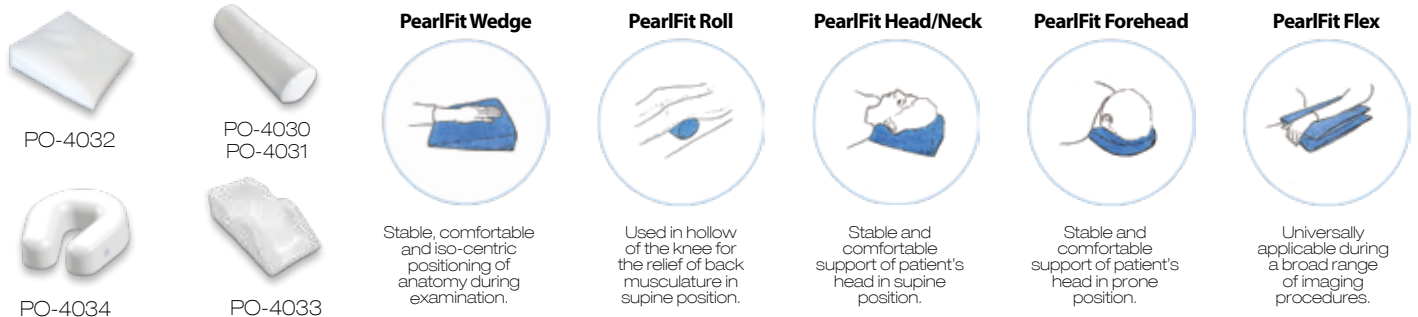

The Patient Comfort System was developed over a 2-year period in close cooperation with leading imaging centers to maximize patient comfort as well as conform to the specific requirements for compatibility and safety. These positioners are compatible with existing tables and are designed to simply replace the current pads. The basic system consists of four rectangular pads covered with advanced breathable space-age waterproof material which resists staining and makes cleaning easier. A knee wedge and neck roll are also included to maximize patient comfort. To increase safety, all pads have an anti-slip undersurface to keep the pads in place while patients are getting on and off the table.

Pearltec Positioners

The innovative patented Pearltec technology uses a combination of soft movable polystyrene pearls and inflatable air chambers to provide optimum fixation of the patient during MRI and CT studies in order to reduce motion artifacts.

Benefits:

Fewer repeated exams.

The soft movable polystyrene pearls along with flexible air chambers let the Pearltec products adapt to the individual patient. This gives optimum fixation of the patient, minimizes motion artifacts, improves image quality and reduces the number of exam repetitions. This makes the workflow significantly more efficient.

Crania Positioner

The CRANIA and GeNUS products from Pearltec are available in both child and adult sizes and have been developed for head and knee examinations. The CRANIA was developed for head exams and functional MRI. The GeNUS was developed to aid in the orthopedic examinations of the knee.

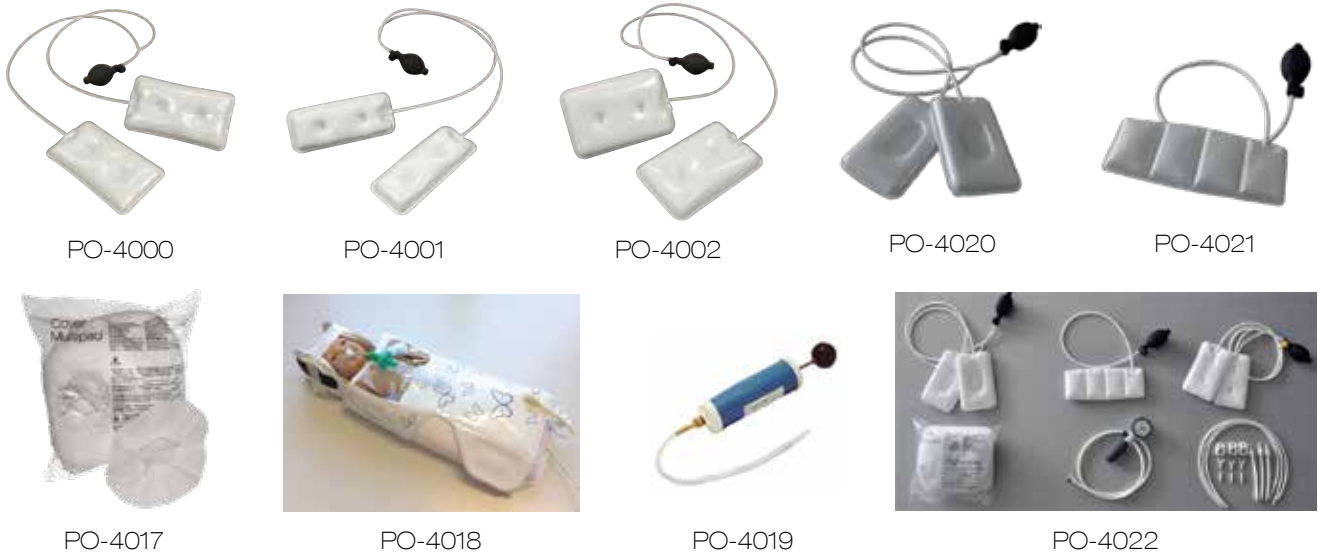

This product complies with the essential requirements of the relevant European health, safety and environmental protection legislation.

Pearltec Multipad Positioners

The MULTIPAD range of products from Pearltec are positioning cushions that can be used anywhere because their size can be changed by simply increasing the volume of air with the hand pump. MULTIPADS are used to position the patient individually and comfortably during CT and MR examinations. This results in less patient movement thereby minimizing motion artifacts.

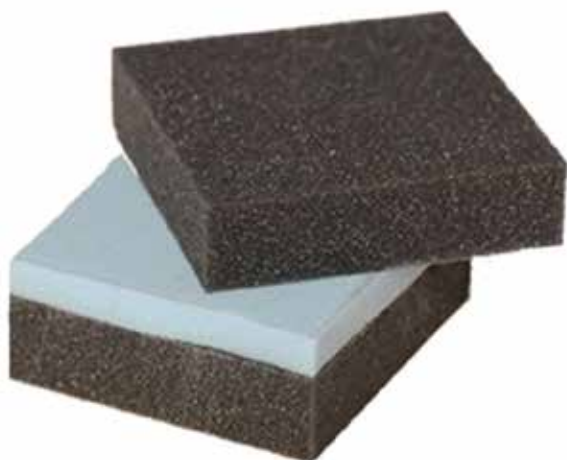

As a guideline, once the red indicator line appears on the Multipad, the customer needs to re-order positioners.

Artificial Sky Ceiling Tile Art and Decorative Wall Murals

How can you have a blue sky in a room with no windows? How can you make your ceilings and walls come to life? With Artificial Sky Ceiling Tile Art and Decorative Wall Murals

The future of radiology departments is not only new imaging equipment, it is focused on becoming more patient-care oriented. A typical MRI or CT Scan can terrify the bravest souls and cause not only unnecessary stress, but delayed recovery times. A relaxed patient is more receptive, therefore they are more responsive to treatment.

Ceiling Art is scientifically proven to: Lower Blood Pressure, Reduce Stress/Anxiety, Decrease Muscle Tension, Reduce Pain, and Re-Direct Negative Thought.

MR Conditional At 7T Or Less

Products from MRlequip Determined to be MR Conditional at 7-T or Less

NISSWA, MN, DECEMBER 21, 2017

MRlequip, an industry leader in innovating non-metallic MR Safe and non-magnetic or weakly magnetic MR Conditional equipment, announces that many of its patient support products have been tested by Dr. Frank G. Shellock. Dr. Shellock is the President of Shellock R & D Services, Inc. and an established MRI safety expert. The results indicated that these products are MR Conditional at 7-T or less.

Using the first clinically approved 7-Tesla MR system (Terra, Siemens Medical Systems), Shellock R & D Services, Inc. examined the magnetic field interaction for each style and type of non-magnetic or weakly magnetic equipment in association with this very-high-field scanner. Dr. Shellock stated, "I am pleased to report that every one of the products that underwent testing, including the relatively larger items such as the stainless steel stretcher, wheelchair, and utility table, passed our test procedures and, thus, are deemed MR Conditional at 7-Tesla or less. Importantly, the items that we tested represent many of the important patient support products that are commonly used in the clinical MRI environment."

"As the first 7-Tesla MRI scanner approved by the Food and Drug Administration hit the market, MRI facilities need to be prepared with new equipment to permit proper patient care in this special setting." Says Erich Schulz, President and Chief Executive Officer of MRlequip. "Today it's necessary to take extra precautions because 7-Tesla MR systems pose more than twice the magnetic field-related issues than the 3-Tesla MR systems."

MRlequip's line of non-metallic, non-magnetic, and weakly magnetic equipment, currently used in MRI facilities around the world, allows for the safe transferring of patients as well as for their proper management within every clinically utilized, MRI suite and includes essential accessories such as oxygen tank holders, gurneys, and IV poles. Determining this equipment to be MR Conditional at 7-T or less allows for their use in the same room as all current FDA approved MRI scanners.

ABOUT MRlequip

MRlequip has been an industry leader in providing non-magnetic MR Safe and MR Conditional equipment for more than 15 years. Working directly with MRI facilities to work on their specific issues, needs and requirements, MRlequip innovates products to work within every MRI setting.

ABOUT SHELLOCK R & D SERVICES, INC.

Shellock R & D Services, Inc. (www.magneticresonancesafetytesting.com and www.mrisafety.com) is the World's most experienced MRI testing company that conducts comprehensive evaluations of implants, devices, objects, and materials. Are your current MRI supplies certified?

MRlequip.com proudly introduces the first of its kind non-ferromagnetic MRI certified biopsy tray to include both a scalpel and needle. The first biopsy tray significantly reduces your fine institution of liability, when used in the prescribed fashion. Please call for MRI certification for future purchases. Thanks to your radiology family, larger production runs have lowered the price to \$399.00 for a case of 10 trays. That's just **\$39.90** per tray.

MRI Non-Ferromagnetic “Certified” Biopsy Tray

Featuring a Non-Ferromagnetic Scalpel and Non-Ferromagnetic Needle

SAFETY: MRlequip.com is committed to bring to you the only MRI Non-Ferromagnetic Certified Biopsy Tray. Designed and certified within the guidelines of the new ASTM standards in effect so your facility no longer has to assume the liability for any safety accidents due to items made with ferrous materials.

USAGE FLEXIBILITY WITH LESS WASTE: Based on customer feedback for increased ordering and procedure flexibility you'll note that we packaged the main biopsy components separately as well as in a MRI biopsy tray. Trays can also be used as a MRI localization tray.

UNIQUE DESIGN: MRlequip.com offers the only MRI Non-Ferromagnetic certified disposable scalpel and MRI Non-Ferromagnetic certified needle.

COST EFFECTIVE: This product is a first of its kind. Developed by technologists who perform the procedures. It is cost effective, practical and safe to use. The trays are completely sterile and disposable.

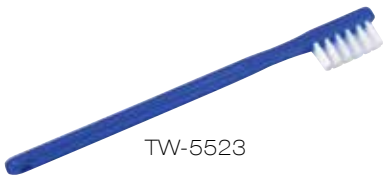

MR Conditional to: 3-Tesla
The trays have a 2 year expiration date.

Accu-Draw IV Clamp

MRI ACCU-DRAW™ provides one-handed access to non-sterile vials while maintaining sterility. ACCU-DRAW keeps vial labels visible at all times, and angles vials so they can be completely emptied. Made of brass, plastic, and aluminum. How it Works: The durable plastic holder accommodates two single-dose and three multi-dose vials at a time. Clamps onto any table surface. Vials that run out can be replaced with fresh ones at any time during the procedure. You'll know vials are secure because they click and lock into place. Holds vials at the perfect angle, allowing complete emptying and reducing medication waste.

MRI Breast Coil Cart

MRI Breast Coil Carts have been extensively tested and are proven to be non-magnetic. All materials used in the fabrication of Breast Coil Carts are non-magnetic, making these Coil Carts MR Conditional! The carts are equipped with heavy duty swivel casters that have an ergonomic dual wheel design. Breast Coil Carts will not alarm Ferromagnetic Detection Systems and have many additional benefits. Not only are the carts MR Conditional, they are extremely durable and moisture proof. These MR Conditional Carts hold up to continuous cleaning and disinfecting, even with straight bleach!

The Coil Cart above was designed to be the same height as the MRI table for easy lifting of the breast coil.

MR Conditional Coil Carts are designed with features that address issues such as suite safety, infection control and ease of operation so that valuable time is not spent taking carts in and out of the room. **Immediate access to coils and supplies improves efficiency in the MRI Suite.**

Made from Andure®, **NOT PVC**, a sophisticated blended resin - This material holds up to continuous disinfecting and cleaning without breaking down and will never delaminate because it is a solid material, making the cart over 150 pounds.

Made of 30% recycled material - Environmental Friendly ... "Green" & 100% Recycleable.

Meets USFDA standards and complies with ASTM F2503 criteria for MR Conditional Designation -

Can remain in the MRI Suite during all procedures

Engineered for durability and strength - Total weight load up to 660 lbs.

Made with heavy duty swivel casters that have an ergonomic dual wheel design - Durable and maneuverable

100% Made in America - Supporting the United States economy and local manufacturers and tradespeople

20 Year Warranty - Cart will not delaminate, chip, rust or decay for a period of 20 years.

Product Specifications: 28" W x 34" H x 44" L - 160lbs.

cart features:

- Moisture Proof
- Stain Resistant
- 100% recyclable
- Chemical Resistant
- Impact Resistant solid resin
- Made from 30% recycled material

MRI Non-Magnetic BabyPac with Integrated Alarms

BabyPac is specially designed to deliver ventilation to small, fragile lungs of patients ranging from neonates through pediatrics up to 20kg with precision and confidence. It has a sophisticated range of ventilation controls including CPAP, variable I:E ratio and variable oxygen concentration. The latter is particularly important in neonatal intensive care and transport since high oxygen concentrations over a prolonged period can be harmful. Baby Vent also incorporates a comprehensive range of alarms. **1 Year Warranty**

MRI Non-Magnetic Pneumatic Transport Ventilator

This ventilator has simple -to-use controls for volume-targeted or pressure-limited ventilation. With a built-in high output demand flow CPAP system, critical care ventilation needs are optimized for spontaneous and mandatory breaths. Operating without the need of electrical power, the ventilator can care for the most difficult patients wherever they may be located.

Pre-Filled Fire Extinguisher

The Model FE-2000 fire extinguisher is designed to be the ideal fire extinguisher for hazard areas that require a reliable and safe non-magnetic fire extinguisher.

Features

- Pre-Filled for A, B and C fires
- No Clean Up - No Residue
- Non-Magnetic (tested up to 3 Tesla)
- Safe for sensitive electronic equipment
- Safe for exposure to occupants
- Zero ozone depletion
- Six-year limited warranty from date of delivery to original end-user purchaser
- FAA approved
- Rechargeable
- UL/ULC Listed
- Meets or exceeds requirements of ANSI/UL 2129 and 711
- Temperature range is -40°F to 120°F (-40°C to 49°C)
- Mounting bracket included
- MSDS included in shipment
- Non-Magnetic to 3.0 Tesla.

ABC Dry Chemical Fire Extinguishers

Attaches to a wall or column with a single fastener (not included). Includes the button hook which allows the extinguisher to rotate nearly 90 degrees in either direction without falling.

Features

- Discharge time: 22 seconds and initial range: 10-15 ft.
- Made of aluminum and stainless steel
- Durable powder coat finish
- Labeled per UN1044 requirements
- Serviced same as others, per NFPA 10 requirements
- Made in the USA from 85%+ domestic materials
- ADA, IFC, ANSI A117.1, AODA, and ISO 21542 Compliant

FE-4001

De-Ionized Water Fire Extinguisher

The ultimate extinguisher for class A fires, especially where a potential Class C (electrical) hazard exists. The fine spray from the unique misting nozzle provides safety from electrical shock, greatly enhances the cooling and soaking characteristics of the agent and reduces scattering of the burning materials. Unequivocally the best extinguisher for hospital environments, telecommunications facilities and "clean room" manufacturing facilities.

User Friendly:

- Wand provides greatest operator safety
- Maximum visibility during discharge
- No electrical conductivity back to the operator
- No thermal or static shock
- Minimal training - simplest to use, least expensive agent available

Clean:

- No toxicity
- No respiratory concerns
- De-ionized water extinguishing agent
- Exclusive crevice free, butt welded cylinder
- Antiseptic white paint finish (easy to clean interior & exterior)
- No powder residue

Screening Magnet

Powerful Rare-Earth Handheld Magnet for Magnetic Resonance Screening/Sites:

This magnet has been specially designed by experienced clinical and research MR practitioners and leaders in the field of MR safety to meet the needs of busy MR sites. The more than 1,200 gauss magnetic field of the magnet exerts a sufficiently powerful magnetic field to sensitively test even weakly ferromagnetic objects. The magnet itself is also composed of a neodymium - a so-called rare earth magnet - that permits it to lose its strength extremely slowly, at a rate of a 1% loss every 100 years. The recessed magnet in a custom foam-fitted housing, the form fitted handle, and the surface ball bearing mounts allow for ready removal of the magnet - by anyone - should it become inadvertently attached to large ferromagnetic objects, such as oxygen tanks, wheelchairs, etc. This magnet was developed in part with the help of **Dr. Emanuel Kanal**, Department of Radiology, University of Pittsburgh Medical School, and is field tested to provide years of reliable MR safety and compatibility testing under typical clinical and research MRI settings. Also optionally available is a foam padded carrying and storage case to protect the magnet between uses.

Specifications:

- Weight: 2 lbs
- Color: Red, Silver lettering
- Magnetic Field Strength: 1,200 gauss
- Dimensions: 3 1/2" height x 3" width x 5 1/2" length

Ferromagnetic Detection System HALO II Plus MRI Entry System

FerrAlert™ HALO II - Ferromagnetic Detector complies with ACR and JCAHO standards to protect the magnet room against moderate to large size ferromagnetic projectiles. This product significantly helps to protect the investment in the magnet room and to avoid a catastrophic accident. FerrAlert™ HALO II ENTRY has been certified by Siemens Medical Solutions for installation and use inside the magnet room for both 1.5T and 3.0T MRI magnets.

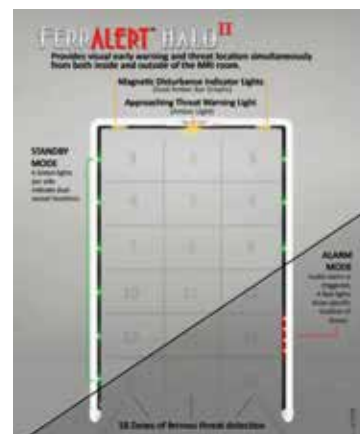

Plus System reduces alarm fatigue by sensing direction of personnel and accepts Ferromagnetic Incident Log Manager (F.I.L.M.)

OPERATION:

The Green LED HALO array illuminated around the MRI entrance indicates that the detector is scanning and there are no ferromagnetic threats detected. A Yellow beacon light indicates that a threat is approaching the portal. The Red LED HALO array flashes the entire portal, indicating a major threat such as a ventilator or oxygen cylinder has approached the portal. The greater the threat, the further away the warning is activated.

SPECIFICATIONS:

Dimensions: Height 83" (211cm), Depth 2.25" (5.7cm)
 Adjustable Width: 42" (107cm) to 52" (132cm)
 Inside Width: 47" (119cm) to 57" (145cm) Outside
 Complies with ES60601-1-8 International Standards for Medical Device Alarms
 Complies with IEC 60101-1:2005 Medical Device Specifications Requirements
 Medical Power Supply: 100 to 240 VAC, 47 to 63 HZ, 42 Watts
 Sensitivity: Adjustable
 Audio Alarm: In Portal
 Photoelectric Beam: Activates Alarm Function mode when moving object enters Portal

FerrAlert™ Ferromagnetic Detection Target Scanner

Ferromagnetic Detection Target Scanners™ are the ONLY ferromagnetic handheld detection system that is presently available on the market. Target Scanner™ does an excellent job of distinguishing ferromagnetic from non-ferromagnetic materials and is very useful if you are informed on the presence of a potentially ferromagnetic object.

Features:

Fully complies with the MR Safety mandates of ACR, TJC, VA and FGI
 Suitable for use with metal gurneys, wheelchairs and detachable tables.
 Affordable

The FerrAlert™ Encompass Incident Log Manager

The FerrAlert™ Encompass automatically detects and logs unintended ferromagnetic objects entering Zone IV. It is the only system that provides a photographic stream and does not require manual logging, thus allowing the technologists to perform uninterrupted patient care without wasting time with self-reporting. The data analysis software allows effortless generation of reports for The Joint Commission inspections. It also allows for the analysis of safety trends that can be shared throughout the entire hospital system.

Features:

Adjustable width 25-52 Inches.
 Sorting of data to identify unintended ferromagnetic objects.
 Easily implemented connectivity and expandability.
 Records images before, during and after the Ferromagnetic threat enters the magnet room.

Dual Sensing Hand-Held Ferromagnetic Detector

Dual Sensing Hand-Held Ferromagnetic Detectors are portable hand-held patient screeners that allow, according to the operator settings, the detection of magnetic metal masses only or magnetic and non-magnetic metals at the same time.

Dual Sensing Hand-Held Ferromagnetic Detectors are the only hand-held MRI patient screening device capable of separately detecting both ferrous and non-ferrous metallic items.

Dual Sensing Hand-Held Ferromagnetic Detectors are designed to be entirely non-ferromagnetic. Therefore, they can be used inside MRI rooms without the risk of being attracted or damaged by the magnets without compromising performance or creating a potential projectile risk.

Includes:

- Hand-held Patient Screener
- 4 low ferromagnetic primary batteries
- Instruction manual
- Certificate of Calibration
- Carry bag

MRI Hand Held Metal Detector

The PD240C is a Hand Held Metal Detector that combines high reliability and ergonomics with advanced detection and operator signaling features. Deep penetration for weapons and minimum metal targets, effective sensitivity to all alloys, exceeding the latest Security Standards and high immunity to external metal masses are among the main peculiarities of this new device.

Features:

- Programmable Sensitivity
- Long Detection Range
- Extended Continuous Operation Time
- Automatic Low Power Mode during Screening Pauses
- Embedded Long Life Rechargeable Batteries
- Embedded Fast and Reliable Battery Charger: no need of batteries removal
- Dedicated Holder acts as Minimum Space Table Stand
- Operator Functions can be customized by the user through PC GUI and USB

GaussAlert Magnetic Field Strength Alarm System

GaussAlert is designed to help keep MR Conditional equipment outside of the MRI exclusion zone. GaussAlert is programmed to alarm when the preset magnetic field strength is exceeded. It produces an attention-getting audio alarm when MR conditional equipment is too close to the MRI magnet. GaussAlert can also be useful as an alert for MR unsafe equipment, such as a crash cart or an emergency resuscitator, which can be kept near, but should not be taken into the MRI magnet room. Invisilube Heavy Duty Clear Aerosol Grease

Invisilube is designed for those specific applications where a clear lubricant is necessary. This clear grease spray works well with wheelchair bearings, journals and other parts that require lube. It will leave no unsightly color or stain. Invisilube sprays out as a liquid and penetrates deeply into hard-to-reach areas on machinery and equipment. Invisilube then sets up, making Invisilube a highly viscous lubricant.

Non Magnetic Non Sparking Toolkits

Our Non-Magnetic MRI toolkits are tested and meet the requirements by the US government for Non-Magnetic Hand tools. The MRI toolkits are for use in 3T magnets and below, so they are deemed MR Conditional. This enables the non-magnetic tools to be used near sensitive equipment. Waterproof Case 5" Deep is injection molded and utilizes ultra high-strength polypropylene copolymer resin. Features a gasketed, water-tight and dust-tight, submersible design that is resistant to UV, solvents, corrosion, fungus and impact damage. It also features a molded-in hinge, patent pending trigger release latch system, a comfortable snap-down rubber over-molded cushion grip handle, and an automatic ambient pressure equalization valve.

Breast Shield

Today, CT Scans play a critical role in the diagnosis and management of most patients with complex thoracic and cardiopulmonary diseases. As the use of CT imaging increases, however, so does the risk for latent carcinogenic effects of ionizing radiation on radiosensitive tissue including the female breast. The recently redesigned AttenuRad Breast Shield System consists of a thin (1 mm) piece of bismuth impregnated synthetic rubber covering that mounts firmly on an offset quarter inch foam base. The breast shield system offers up to a 57% reduction of radiation exposure during a CT scan without significant changes in image quality, including artifacts and beam hardening effects. The single-piece AttenuRad CT Breast Shield is designed for multiple uses.

Adult Breast Shield Covers - Case of 10

Fits both MO-3002-MD & MO-3002-LG.

Plastic, Latex Free Covers comes in a Package of 10

Introducing MRlequip.coms' new disposable covering for the Adult Breast Shield System. The new plastic covering is cost-effective alternative to the single-use Adult Breast Shield, reducing the risk of contamination while still providing an artifact and streak-free image.

CT Breast Shield System

Studies have indicated that infants and children are as much as 10 times more susceptible to carcinogenesis from radiation than adults. Breast tissue exposed to radiation from CT procedures involving the chest or abdomen is an area of particular concern for young females. The CT Breast Shield System provides significant in-plane breast shielding (57%) for pediatric MDCT, without qualitative or quantitative changes in the CT image. The use of the system's offset foam base gives the shields additional substance and durability, making them easy to use. The use of the elevating foam also decreases the patient's exposure to scattered radiation.

Thyroid Shields - Case of 10

Positioned over the Adam's Apple, the AttenuRad CT Thyroid shield is designed to provide maximum protection to the radio sensitive thyroid gland. To ensure tight positioning, a curved notch in the center of the shield is placed around the Adam's Apple and an adhesive backing holds the shield firm as the patient breathes and swallows. The AttenuRad CT Thyroid shield, when used for the soft tissues of the neck, is cut to a thickness of 1 mm allowing for a 60% dose savings to the Thyroid.

Model	Des.	Description	Price
MO-3001		Thyroid Shield (10 per case)	\$138.33 cs.

Eye Shields - Case of 20

The lens of the eye is sensitive to radiation during routine Cranial CT. Patient undergoing routine CT scans of the head are especially vulnerable to complications. The AttenuRad CT Eye Shield is a single-piece bismuth impregnated synthetic rubber covering designed to provide significant protection. The shield molds over the patients nasal bridge with the shielding portions laying flat over the patients closed eyes. Adhesive material ensures a tight seal with minimal air gaps. This shield is cut to a thickness of 1 mm, allowing for 50% dose savings to the eye lens. The AttenuRan CT eye shield, which can be used both for adults and pediatrics, is intended to be a single use product because of potential biological contamination.

MR Conditional at 7T or Less

Products from MRlequip Determined to be MR Conditional at 7-T or Less

NISSWA, MN, DECEMBER 21, 2017

MRlequip, an industry leader in innovating non-metallic MR Safe and non-magnetic or weakly magnetic MR Conditional equipment, announces that many of its patient support products have been tested by Dr. Frank G. Shellock. Dr. Shellock is the President of Shellock R & D Services, Inc. and an established MRI safety expert. The results indicated that these products are MR Conditional at 7-T or less.

Using the first clinically approved 7-Tesla MR system (Terra, Siemens Medical Systems), Shellock R & D Services, Inc. examined the magnetic field interaction for each style and type of non-magnetic or weakly magnetic equipment in association with this very-high-field scanner. Dr. Shellock stated, "I am pleased to report that every one of the products that underwent testing, including the relatively larger items such as the stainless steel stretcher, wheelchair, and utility table, passed our test procedures and, thus, are deemed MR Conditional at 7-Tesla or less. Importantly, the items that we tested represent many of the important patient support products that are commonly used in the clinical MRI environment."

"As the first 7-Tesla MRI scanner approved by the Food and Drug Administration hit the market, MRI facilities need to be prepared with new equipment to permit proper patient care in this special setting." Says Erich Schutz, President and Chief Executive Officer of MRlequip. "Today it's necessary to take extra precautions because 7-Tesla MR systems pose more than twice the magnetic field-related issues than the 3-Tesla MR systems."

MRlequip's line of non-metallic, non-magnetic, and weakly magnetic equipment, currently used in MRI facilities around the world, allows for the safe transferring of patients as well as for their proper management within every clinically utilized, MRI suite and includes essential accessories such as oxygen tank holders, gurneys, and IV poles. Determining this equipment to be MR Conditional at 7-T or less allows for their use in the same room as all current FDA approved MRI scanners.

ABOUT MRlequip

MRlequip has been an industry leader in providing non-magnetic MR Safe and MR Conditional equipment for more than 15 years. Working directly with MRI facilities to work on their specific issues, needs and requirements, MRlequip innovates products to work within every MRI setting.
