MRI Non-Magnetic Pediatric Equipment

Company Policy

Office Hours: Monday thru Friday 7:00 am to 4:30 pm (CST)

TERMS: Our terms are NET 45 DAYS, C.O.D. if not current. Payments become due 45 days after the invoice date, if the order is complete or not. Shipments will be held if an account contains invoices over 45 days past due. The account will go on permanent C.O.D. when there is a history of past dues. Third party collection fees and legal fees must be paid in full before an account can be reopened.

FREIGHT: Freight will be prepaid and added to your invoice. Freight charges are part of your invoice and are due accordingly.

PROOF OF DELIVERY: We will provide proof of delivery within 30 days of shipment upon request.

CLAIMS FOR DAMAGE OR SHORTAGE: Must be made within 48 hours of receiving. Shipping containers must be kept if shipment is damaged or short.

SHIPMENTS ARRIVING VIA LTL TRUCK (not UPS or Fedex ground): **The packages must be opened and inspected at time of delivery for any concealed damage.**

PRICES: All prices are subject to change without notice. Prices reflect single unit cost, except where noted.

MINIMUM ORDER: No Order is too small. Excludes tools.

RETURNS: No item will be accepted for return after 30 days from date of purchase. All returns must be labeled with a return authorization number which can be obtained from our customer service department. **Claims for shortage, breakage or any other reason must be made within 48 hours of receipt.** Shipping containers must be kept if shipment is damaged or short. All returns are subject up to a 25% restocking fee. The customer is responsible for all freight charges incurred.

CANCELLATION CHARGES: Orders may be canceled without charge providing your request is received prior to shipment except custom orders. If the merchandise has been shipped there will be up to a 25% restocking fee, plus all freight charges incurred. Please get cancellation confirmation to avoid these charges.

OTHER ORDER INFORMATION: We reserve the right to split shipments. We sell on first come first serve basis. Where available, substitutions will be shipped if the product ordered is not available or discontinued.

Safety is our Business!

Our dedication to safety begins at 7:00 AM every day of the work week - it is our livelihood. All products in our warehouse are checked on entry and then re-checked on exit. Products drop shipped from our manufacturers directly to your door are brought in randomly and re-tested for safety verification. We continually work with all manufacturers to ensure safety and proper designation. For more information on the ASTM Standard visit www.ASTM.org and search for F2503-05.

For more helpful information pertaining to MR Safety, you can visit
www.MRI-Planning.com www.MRISafety.com www.radiology.upmc.edu/MRSafety

Designation

MR Safe—an item that poses no known hazards in all MR environments.

MR Conditional—an item that has been demonstrated to pose no known hazards in a specified MR environment with specified conditions of use. Field conditions that define the specified MR environment include field strength, spatial gradient, dB/dt (time rate of change of the magnetic field), radio frequency (RF) fields, and specific absorption rate (SAR). Additional conditions, including specific configurations of the item, may be required.

MR Unsafe—an item that is known to pose hazards in all MR environments.

Products **NOT** marked with a designation have been tested under the past methods and are currently being re-evaluated under the new ASTM Standards. Products will be updated continually.

MRI Experience Guide and Children's Award Certificate

For Kids

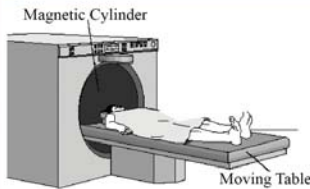

Hey there little one, I'm MRI Teddy and I am going to tell you about your MRI scan. MRI means Magnetic Resonance Imaging and it helps the doctors to look inside you by taking pictures with the help of a giant magnet. And the best part is, it doesn't even hurt!

An MRI Technologist, which is a fancy name for the nice person who will be taking your pictures, will meet you and your parents at the clinic. The MRI Technologist will then explain to you and your parents how everything will work.

Before you can enter the MRI room you must be sure to remove anything metal from your pockets and clothes. Metal items can cause the pictures to not turn out right. These items might include jewelry, money, pens, paper clips, keys, berets and such. You don't have to worry, your items will be stored safely in a locker or given to your parents.

Your MRI Technologist will let your parents know what you should wear and to be sure that there are no metal buttons or zippers on your clothes. You may even bring in a CD of your favorite music to listen to, it will make the time go by much faster.

Next, the MRI Technologist will bring you and your parents into the MRI room. You will lie down on a bed by the opening of the machine and the MRI Technologist will give you some headphones that you can listen to your music with. They will also give you a button to use so you can talk to the MRI Technologist at any time.

When you are ready, the MRI Technologist will slide you into the MRI machine. The MRI Technologist will be standing right by you. The scan will last around 15-30 minutes. You will hear a loud fast knocking noise.

It is very important that you do not move during the picture taking. If you move at all, such as talking, turning your head, wiggling or moving your arms, the pictures will not turn out right and you will have to start all over again.

If you want to learn more about how an MRI machine works, visit this website: <http://health.howstuffworks.com/mri.html>

Visit www.MRlequip.com to download your FREE copy of the Children's MRI explanation document and award certificate.

Ease the minds of parents and children while rewarding the little ones for a job well done!

Feel free to make as many copies as needed to handout to your patients.

Both pages are 8 1/2" x 11"

Congratulations!!!

Ferno MRI Gurney 500 lb Capacity

Model 35ANM The lightest cot available with a 500 lb weight capacity. The Ferno Model 35ANM Mobile Transporter Multi-Level Roll-In Cot combines the benefits of a multi-level cot with the easy loading feature of a roll-in style cot. Designed for a variety of ambulance floor heights, the Mobile Transporter will work well with station wagons, vans or modular ambulances. EMTs no longer have to lift from the side to load the cot. One EMT is positioned at the foot of the cot, while the other EMT simply raises the undercarriage during loading. Eight height positions enable easy patient transfer from any couch, bed or treatment table. The Mobile Transporter should be rolled in a level position. The two inclined positions are designed as loading positions for either vans or modular ambulances. The Model 35ANM is the Non-Magnetic version for medical treatment areas where the cot must be non-magnetized.

Specifications:

Max Height: 40"
Min Height: 9"
Max Length: 63" -79"
Width: 24"
Weight: 74 lbs
Number of Positions: 8
Casters: All Locking

Weight Capacity: 500 lbs

Warranty

1 Year on frame
90 Days on pad and straps

Suction

MRI Non-Magnetic Resuscitator Infant Bag with Infant Mask

Ambu SPUR II is the only resuscitator made of a SEBS material instead of PVC. This classifies Ambu SPUR II as environmentally safe and fully disposable, thus eliminating all risks of cross contamination.

The unique single-shutter valve has proven its reliability over two decades of emergency and hospital use. The crystal clear valve housing provides an unimpeded view of valve operation, and the slim design makes it easier to view the mask.

The Ambu SPUR II provides users with exceptional tactile and visual feedback during resuscitation. The bag is highly responsive, with minimal mechanical resistance – some even say it's a natural extension of the hand.

The convenient handle makes it easier to hold and ventilate a patient with just one hand if necessary. This special design provides optimum stroke volume with perfect recoil, yet is smaller and lighter than most other disposable units.

The bag itself is thin and responsive and it's SafeGrip™ surface ensures that the Ambu SPUR II can be firmly squeezed with ease. A stiff and heavy bag can quickly cause muscle cramps and shoulder pain.

All Ambu SPUR IIs are equipped with a medication port that allows for quick medication delivery.

Pediatric sizes have a soft splashguard for user safety and all pediatric and infant sizes are equipped with an override valve system that prevents allowing too much pressure into the patient's lungs.

For more specifications please visit www.MRlequip.com.

Features:

- Unique single-shutter valve system for reliable functionality
- Integrated handle for user comfort and uniform compression
- Thin-walled compression bag allows for lung compliance and "feel"
- SafeGrip™ surface for secure handling in stressful environments
- Medication port permits quick medication delivery without disconnecting the Ambu SPUR II from the ET tube
- Easy attachment of manometer and PEEP valve

Ventilators

Ventilator

A small, lightweight transport ventilator designed for use on patients from pediatric to adult in size. This ventilator has simple -to-use controls for volume-targeted or pressure-limited ventilation. With a built-in high output demand flow CPAP system, critical care ventilation needs are optimized for spontaneous and mandatory breaths. Operating without the need of electrical power, the ventilator can care for the most difficult patients wherever they may be located.

Use this ventilator as your key to an all hazards approach to mechanical ventilatory support. Be prepared for any emergency or loss of electrical power.

Use this ventilator in your ambulance, on your aircraft, within MRI or wherever you need mechanical ventilation.

Benefits

All pneumatic operation, no batteries or external power needed to provide ventilation

Switch from noninvasive face mask ventilation to invasive ventilation seamlessly and without interruption

Low spontaneous work of breathing compared to other transport ventilators

Built-in CPAP / PEEP system with automatic sensitivity for changing patient needs means no need for external CPAP valves

Mandatory and spontaneous breaths at 100% or use 65% oxygen to prolong your oxygen tanks

MRI compatible with remote alarm capability so you can meet patient needs in your special procedure areas

Integrated all-pneumatic alarm system keeps you alerted to patient circuit disconnects and a low gas supply

The mobile stand (VE-5010) includes ventilator mount and double E cylinder holder.

The manifold system (VE-5011) includes 2 oxygen regulators and hoses

VE-5011P	Manifold System	\$1,088.25 ea.

Baby Vent

Baby Vent is specially designed to deliver ventilation to small, fragile lungs of patients ranging from neonates through pediatrics up to 20kg with precision and confidence. It has a sophisticated range of ventilation controls including CPAP, variable I:E ratio and variable oxygen concentration. The latter is particularly important in neonatal intensive care and transport since high oxygen concentrations over a prolonged period can be harmful. Baby Vent also incorporates a comprehensive range of alarms.

Product Features

- 1 Year Warranty
- Unique variable oxygen concentration gas mixing system
- Inspiratory pressure control
- Separate controls for inspiratory and expiratory time
- Four operating modes
- PEEP/CPAP control
- Adjustable pneumatic pressure relief with audible alarm
- Integrated pressure monitoring/alarm system
- MRI compatible up to 3 Tesla
- Low gas supply indicators for O2 and air
- Complete pneumatic operation
- Lightweight and durable

Desktop/ Portable Pulse Oximeter

The Nonin 8600FO Pulse Oximeter incorporates a Fiber Optic sensor, meeting the unique needs of MRI users for patient safety and image quality. Safe-to-use - Fiber optic sensors eliminate the possibility of RF burns in the MRI environment

Convenient - Non-magnetic pole mount system for easy access

Economical - Long-life internal rechargeable battery system and light-weight design

Customizable - pulse tone with variable pitch; audible and visual alarms for pulse rate & SpO2

Expandable - Optional 18 hour memory for software review of SpO2 and pulse rate

Flexible - Multiple interface & printing options

Pole Mount - Fits poles 5/8" to 1 1/2" Diameter. Poles sold separately below.

Warranty

3 years on pulse oximeter, 1 Year on internal battery, 90 Days on fiber optic cords and other components

Fiber Optic Sensors must be ordered separately, they are not included with the pulse oximeter.

Laryngoscope

Introducing the first fiber-optic intubating laryngoscope set designed specifically for use within the magnetic resonance (MR) environment.

Long Life - Laryngoscope handle developed from selected low-magnetic materials. Proprietary low-magnetic signature lithium battery delivers 4 times the useful life of a standard alkaline battery.

High Intensity - A 3.5V halogen lamp yields a high-intensity, fiber-optic delivered light beam.

Compatible - Works with a broad range of Fiber-optic Laryngoscope Blades

MEDI-TRACE™ Tape PUPPYDOG™ Pre-wired Electrodes

PUPPYDOG™ clear tape pre-wired electrodes use a patented conductive adhesive hydrogel which provides superior adhesion while minimizing irritation to delicate newborn skin. The clear tape substrate is comfortable, allows visibility to the skin, does not absorb fluids and slows hydrogel moisture loss under warming lights. PUPPYDOG™ electrodes also come with radiolucent wires for use during x-ray procedures and are MRI safe. The wires on the PUPPYDOG™ electrodes are 24" in length, terminate in the industry standard .060" safety socket and are color coded for easy lead designation.
 3 per pack, 300 per case

Safety and Movement Monitoring System

The "Safety and Movement Monitoring System" is a revolutionary device used to focus on the patients breathing while they are inside the bore of the magnet. The system utilizes our high definition RF shielded camera which can be mounted on any wall in the magnet room. The entire system is shielded and filtered to remove any unwanted image artifacts. The live video feed is then sent to a high definition monitor inside the operator room to deliver a crisp image to the system operator. This system will ensure the patient a shorter scan time along with the attention they need and deserve.

MRI conditional for 1.5T. 3T system available please call for pricing and part numbers.

Features Single Camera System:

MRI safe, RF shielded camera with varifocal lens
 RF shielded signal and power cables
 19" LCD HD ready monitor
 Penetration panel BNC filters (qty:2)
 12VDC power supplies
 Non-ferrous camera wall-mount
 EZ-Install instruction guide

Features Dual Camera System:

MRI safe, RF shielded camera with varifocal lens (qty: 2)
 RF shielded signal and power cables (qty: 2)
 19" LCD HD ready monitor
 Penetration panel BNC filters (qty: 4)
 12VDC power supplies (qty: 3)
 Non-ferrous camera wall-mounts (qty: 2)
 EZ-Install instruction guide

SAMM System

MRI Non-Magnetic Emergency and Transport Ventilator

The emergency ventilator is designed for caregivers wherever breathing failure emergencies occur: in hospitals, industrial or commercial setting, transport situations, or remote locations. The unit's simplicity, portability, and safety make it the ideal choice for emergency ventilation. A single control for setting the frequency and tidal volume, including a click-stop setting at the recommended adult position, enables rapid set-up in demanding circumstances. Auto/manual controls, a patient demand system, MRI compatibility, and other features provide the means to manage respiratory emergencies.
1 Year Warranty

Technical Specifications

- Principle of Operation
Oxygen powered, hand-held control unit with patient valve including automatic and manual modes with demand breathing
- Manual Mode
Preset breaths, singly or in a controlled breathing pattern may be selected by use of a push-button or omni-directional lever
- Automatic Mode
The ventilatory resuscitator cycles in accordance with the setting of a single control that changes the tidal volume and frequency dependently with a constant I:E ratio of 1:2
- Patient Type
Patients above 10kg with and without spontaneous breathing
- Demand
Included
- Control
Single, calibrated, tidal volume/frequency control gives simultaneous and inter-dependent adjustment of tidal volume and frequency

Pediatric Immobilization

The Hugger Complete Unit

The Hugger® positions infants and small children quickly and correctly, reducing the need for repeat exposures. Infant/Child mobility has never been so easy. The Hugger® is designed to hug rather than confine. Achieves womb-like warmth and security. The Hugger® includes one each of the following: foam insert, Plexiglas™ base, head restraint, body wrap with arm straps and leg straps. The infant Hugger® is for infants up to 3 months. The Child Hugger® is for infants 4 months to 3 years. For a complete list of replacement parts please refer online at www.MRlequip.com or call customer service.

Model	Description	Price
FO-2167P	Infant Size	\$264.12 ea.
FO-2173P	Child Size	\$409.20 ea.

CT Hugger Complete Unit

The CT Hugger® positions infants and small children quickly and correctly, reducing the need for repeat exposures. Infant/Child mobility has never been so easy. The CT Hugger® is designed to hug rather than confine. Achieves womb-like warmth and security. Radius base prevents artifacts and better fits MRI units. Aluminum equivalency below 1.5mm. The Hugger® includes one each of the following: foam insert for infant size and child size, Plexiglas™ base, head restraint, body wrap with arm straps and leg straps. The infant CT Hugger® is for infants up to 3 months. The Child CT Hugger® is for infants 4 months to 3 years. For a complete list of replacement parts please refer online at www.MRlequip.com or call customer service.

Model	Description	Price
FO-2179P	CT Hugger	\$748.65 ea.

Pediatric Immobilization

The pediatric immobilizer is less frightening than most pediatric positions. The child rests on a 6 1/2" W x 40" L wood board. Gentle, secure immobilization is ensured by Velcro® brand blanket and straps that attach to a hook located under the board. Octagonal bases at both ends of the board allow you to position and stabilize the child at any of the eight positions (each 45° apart) around the octagonal circumference. Open base ends accommodate taller children. Use for chest, abdomen, phelography and cystography, upper GI and barium studies, CT and MRI, or as a craniograph for skull and sinus studies. For a complete list of replacement parts please refer online at www.MRlequip.com or call customer service.

Complete Kit Contains:

1 Board
 2 Octagons
 1 Large U Shaped Cushion
 1 Small U Shaped Cushion
 1 L Shaped Cushion
 1 Large Velcro Blanket
 1 Small Velcro Blanket
 Straps for Head and Arms

With No Accessories Contains:

PO-1031P	Small	\$133.25 cs.
PO-1032P	Large	\$133.25 cs.

CT Breast Shield System

Studies have indicated that infants and children are as much as 10 times more susceptible to carcinogenesis from radiation than adults. Breast tissue exposed to radiation from CT procedures involving the chest or abdomen is an area of particular concern for young females. The CT Breast Shield System provides significant in-plane breast shielding (57%) for pediatric MDCT, without qualitative or quantitative changes in the CT image. The use of the system's offset foam base gives the shields additional substance and durability, making them easy to use. The use of the elevating foam also decreases the patient's exposure to scattered radiation.

Pediatric Protection

Model	Description	Price
MO-3010P	■ Neonatal, Box of 10	\$121.05 box
MO-3011P	■ 1 Year Old, Box of 8	\$121.05 box
MO-3012P	■ 5 Year Old, Box of 6	\$121.05 box

The Shield - Scanner Table Protection

Protect your scanner table from fluid contamination with The Shield. This system incorporates a coated foam table pad and reinforced PVC side flaps. The patient rests comfortably on the table pad while the flaps shield the gaps in the table from fluid contamination. The convenience of this system can be adapted to any imaging modality including CT, MRI, Nuclear Medicine, Angio Suites and Cath Labs

Benefits of The Shield:

- ScanCoat® table pad is fluid resistant and cleanable, creating a sanitary environment and increasing the life of the pad
- Reinforced PVC flaps direct fluids away from patient
- Slide groove technology allows for infinite adjustability of security straps
- Reinforced vinyl security straps will not tear, while maintaining the patients position

Pediatric Protection

Containers are Non-Refillable

Neonatal Noise Guards

A must have for premie and newborn patients, Neonatal Noise Guards protect these little one's sensitive ears in the MRI environment, and provide peace and quiet in the NICU. Neonatal Noise Guards reduce the surrounding environment noise level by at least 7db, with a reduction in sound pressure of more than 50%. Disposable.

Box includes 6 pairs
