Who we are?

Now, at your fingertips, is a diverse line of Non-Ferrous and PVC products for your MRI environment. MRlequip.com was established to provide the highest quality MRI compatible equipment with price tags significantly lower than the current marketplace. In the past, it was a priority to clear the room of all ferrous materials that pose an immediate risk. Now, a majority of those items can be replaced, in extent saving time and creating a friendlier environment for both the patients and the providers. Beyond the standard items, such as wheelchairs, I.V. poles and stools, a whole new world of products has opened up. Ranging from sound systems to furniture, these products increase patient comfort while decreasing concerns for injury and liability. At MRlequip.com, we are constantly researching new products and welcome any suggestions you might have. If you can't locate what you require, let us know. Our design teams are ready for their next challenge.

What can we do for you?

Upon initial contact we will customize a package based upon the procedures performed as well as the strength, weight capacity and brand of MR system(s) used. We will take into account specific product requests and determine the most cost effective solution to our customers needs. We present a quotation on a full custom package including freight, rather than a pre-packaged kit that is incomplete and contains items that may go unused. We specialize in custom non-ferrous products that may require additional time for production. We will provide the necessary lead time and discuss a final purchase order date that will allow for delivery before a grand opening or re-opening. Once a purchase order has been received, upon the customers request; we may hold all products to be delivered at one time or have it delivered as available. Products in stock at the time of order will be immediately tagged for that order and held until the release date. This eliminates the possibility of a stock item at order date becoming out of stock on the release date. We supply MSDS sheets on pertinent products for our customer's records. Two days before release date, we will contact our customer to verify they're ready for the delivery. If there is a delay in the facilities opening, we will hold the product until needed at no additional charge.

Above all else, we will take that extra step in providing our customers with knowledgeable advice, low prices, on-time delivery and excellent customer service. We recognize that each of these attributes are vital to a smooth transaction and a satisfied customer.

Safety is our Business!

Our dedication to safety begins at 7:00 AM every day of the work week - it is our livelihood. All products in our warehouse are checked on entry and then re-checked on exit. Products drop shipped from our manufacturers directly to your door are brought in randomly and re-tested for safety verification. We continually work with all manufacturers to ensure safety and proper designation.

The highly anticipated Standard Practice for Marking Medical Devices for Safety in the Magnetic Resonance Environment by American Society for Testing and Materials (ASTM) has arrived.

As recommended by ASTM Intl; the intent of this practice is to provide needed information about the safety of items in and near MR scanners using a compact and easily recognized set of symbols and terms. The terms MR safe and MR compatible as first defined in 1997 in the FDA draft guidance document, "A Primer on Medical Device Interactions with Magnetic Resonance Imaging Systems," have been used to describe the safety of devices in and near MR systems. However, there has been a great deal of confusion surrounding this terminology. An incorrect assumption is often made, and users often incorrectly assume that items labeled MR safe or MR compatible are safe or compatible for any MR environment. MR environments vary in terms of magnetic field strength and RF conditions. This new system eliminates much of that confusion.

Ferromagnetic Detection Systems

If you notice this label associated with a product throughout this catalog, you can be assured that it will pass through any Ferromagnetic detection system. These products have been tested extensively to gain this approval. MRlequip is proud to offer your MRI environment the largest array of Non-Ferromagnetic products available on the market today.

FERRAlert HALO II Plus

Ferromagnetic Detection System - MRI Entry System

FerrAlert™ HALO II - Ferromagnetic Detector complies with ACR and JCAHO standards to protect the magnet room against moderate to large size ferromagnetic projectiles. This product significantly helps to protect the investment in the magnet and to avoid a catastrophic accident. FerrAlert™ HALO II ENTRY has been certified by Siemens Medical Solutions for installation and use inside the magnet room for both 1.5T and 3.0T MRI magnets. **Plus System reduces alarm fatigue by sensing direction of personnel and accepts Ferromagnetic Incident Log Manager (F.I.L.M.)**

OPERATION:

The Green LED HALO array illuminated around the MRI entrance indicates that the detector is scanning and there are no ferromagnetic threats detected.

A Yellow beacon light indicates that a threat is approaching the portal.

The Red LED HALO array flashes the entire portal, indicating a major threat such as a ventilator or oxygen cylinder has approached the portal.

The greater the threat, the further away the warning is activated.

Ferrous objects not approaching the entrance to Zone IV do not trigger an audible warning.

SPECIFICATIONS:

Dimensions: Height 83" (211cm), Depth 2.25" (5.7cm)

Adjustable Width: 42" (107cm) to 52" (132cm) Inside; 47" (119cm) to 57" (145cm) Outside

Complies with ES60601-1-8 International Standards for Medical Device Alarms

Complies with IEC 60101-1:2005 Medical Device Specifications Requirements

Medical Power Supply: 100 to 240 VAC, 47 to 63 HZ, 42 Watts

Sensitivity: Adjustable

Audio Alarm: In Portal

Photoelectric Beam: Activates Alarm Function mode when moving object enters Portal

The Ferromagnetic Incident Log Manager (F.I.L.M.)

Facilitates the Joint Commission compliance for incident logging

Logs potential and actual ferromagnetic incidents

Provides a visual record of the events leading up to the incident

Provides a visual record of the actions after the incident

All records of incidents are stored and date and time stamped

Assists with Root Cause Analysis
