### Company Description

KyphoLift is an elegantly simple solution to a 40-year-old problem in radiology: manually lifting patients and maintaining their position throughout an MRI exam. Patients with kyphosis, obesity, and other mobility limitations introduce significant time, cost, and liability to imaging departments.

Flat MRI tables do not accommodate spinal curvature or diverse body types, forcing technologists to lift patients manually or rely on makeshift padding like pillows and foam wedges. These outdated methods compromise safety, increase motion artifacts, and extend scan times. As imaging volumes grow and staffing shortages intensify, these inefficiencies create a ripple effect—delaying schedules, reducing scanner utilization, and raising injury and liability risks for health systems.

Until now, there has been no safe, efficient, and MRI-compatible solution. KyphoLift and KyphoWedge empower a single technologist to achieve stable, high-quality positioning that holds throughout the exam—even in short-staffed or on-call settings—while reducing lifting, liability, and motion artifacts, and increasing scan efficiency.

Unlike any other device, KyphoLift is purpose-built for use in MRI Zone IV and engineered specifically for the imaging environment. It fills a long- overlooked gap in radiology by providing a practical, scalable solution to a universal clinical challenge.

Our mission is to transform patient care through thoughtful, practical innovation—giving imaging teams the tools to protect staff, ensure precision, and elevate the experience for every patient, every time.

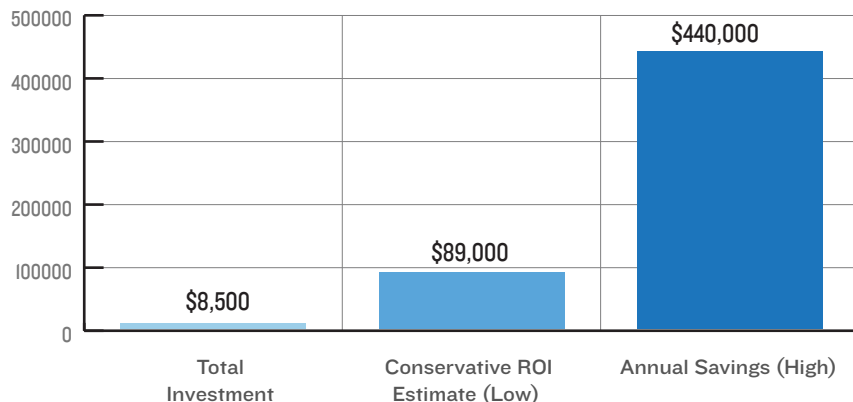

**“I cannot imagine doing  
my scans without it!”**

— MRI Patient via RaeDawn Davis,

## EXECUTIVE SUMMARY

Roi: 7.3x - 40.4x break-even period: 12 - 50 days

## QUICK VALUE SNAPSHOT

- Challenge
- Manual lifting & staff injury
- Patient instability & motion
- Workflow delays & burnout
- Rising patient complexity
- KyphoLift / KyphoWedge Solution
- Lift-free, ergonomic platform reduces risk
- Low COG design improves positioning and image quality
- Faster turnover, repeatable setup
- Designed for kyphosis, obesity, and limited mobility

## KYPHOLIFT

Lift-free MRI patient positioning system

## KYPHOWEDGE

Adjustable height, leg positioning support system, burn-prevention pads, stabilizing strap, and 7-pad interlocking design

## GLEITER

78" x 24" Cross-Link Foam Non-Stick Imaging / Table Pad with Reinforced Handles
